

PARTICIPATION AGREEMENT – ENVIRONMENTAL SERVICES

FOR AGENCY USE ONLY

Client ID No.

Case ID No.

The Wisconsin Asthma-Safe Homes Program provides asthma education and an environmental check of your home. The program may help you manage your (or your child's) asthma. We need your consent to provide environmental services, including in-home environmental assessment, possible remediation of asthma triggers, and coordination of these environmental services, and to share information with the Asthma-Safe Homes Program administrators and your landlord (if renter).

Consent to Receive Environmental Services

If you agree to receive environmental services, an Asthma-Safe Homes Program environmental services provider will conduct a thorough in-home environmental assessment and may recommend remediation services up to \$5,000 based on their assessment findings. If your home qualifies for remediation services, an environmental services provider will develop a scope of work to detail the proposed remediation services and repairs. If agreed upon by the home's property owners and occupants (if not property owners), an environmental services provider will schedule work to be completed on your home at no cost to you (this may be completed by sub-contractors of the environmental services provider). Property owners must sign a contract for the work to be completed. Upon completion, an environmental services provider will review and approve the work. The benefit of agreeing to receive environmental services is that your home may receive free remediation services and home repairs that can help reduce asthma triggers. You can choose to decline services.

Consent to Release Information

Your environmental services provider shares information learned during the assessment of your home with your landlord (if renter) and the Asthma-Safe Homes Program administrators at the Wisconsin Department of Health Services (WI-DHS). Information shared with WI-DHS is for purposes of reporting and program improvement. Any information shared for those purposes will not include identifiable information.

Program Expectations

- Ensure that your home is safe and accessible to Asthma-Safe Home environmental services providers while they conduct the in-home environmental assessment and provide remediation services.
- Notify Asthma-Safe Home environmental services providers of any issues that may interfere with project work or if you need to reschedule an appointment.
- Property owners and occupants (if not property owners) must review and agree to the project scope of work.
- Property owners must have proof of home insurance.

I have read and understand the above program expectations. I agree to take part in Asthma-Safe Homes Program's environmental services.
