Other Consequences:

Note: These consequences may vary depending upon whether or not the individual is in an inpatient setting. It is also possible that in unusual situations, little or no adverse consequences may occur if the medications are not administered.

See Page 2

Client Initial _____ Date _____

4. Possible side effects, warnings, and cautions associated with this medication are listed below. This is not an all-inclusive list but is representative of items of potential clinical significance to you. For more information on this medication, you may consult further with your physician or refer to a standard text, such as the PDR. As part of monitoring some of these potential side effects, your physician may order laboratory or other tests. The treatment team will closely monitor individuals who are unable to readily communicate side effects in order to enhance care and treatment.

Continued – Possible side effects, warnings, and cautions associated with this medication.

Most Common Side Effects: Headache, trouble sleeping, drowsiness, dizziness, nervousness/anxious, nausea, diarrhea, dry mouth, stomach upset, lower appetite, and sexual issues (erectile dysfunction)

Less Common Side Effects: Sweating, decreased libido, abnormal ejaculation, constipation, decreased appetite, frequent urination, heartburn, chest pain, upset stomach, or changes in taste.

Check with your doctor immediately if the following less common side effects occur: Behavior, mood, or mental changes; trouble in breathing; trouble in urinating; twitching.

Rare Side Effects
Check with your doctor immediately if any of the following rare side effects occur: agitation; blurred vision; clumsiness or unsteadiness; confusion; convulsions (seizures); fever; inability to move eyes; increase in body movements; menstrual changes; nose bleeds; overactive reflexes; poor coordination; red or irritated eyes; redness, tenderness, itching, burning or peeling of skin; restlessness; shivering; skin rash; sore throat, fever, and chills; sweating; talking or acting with excitement you cannot control; trembling or shaking; unusual bruising; unusual, incomplete, or sudden body or facial movements; unusual secretion of milk, in females; weakness.

Caution
- Avoid Drinking alcohol while taking fluvoxamine
- May cause blurred vision or drowsiness, caution driving or other tasks until you know how you react
- Do not stop taking this medication suddenly, your doctor will slowly decrease the dose until you can discontinue medication
- Tell your doctor if you have any thoughts of self-harm

Warning
BLACK BOX WARNING
Antidepressant and Suicidality: Antidepressants increased the risk compared to placebo of suicidal thinking and behavior (suicidality) in short term studies in children, adolescents, and young adults with major depressive disorder (MDD) and other psychiatric disorders. Anyone considering the use of this drug or any other antidepressant in a child, adolescent, or young adult must balance this risk with the clinical need. Short-term studies did not show an increase in the risk of suicidality with antidepressants compared to placebo in adults beyond age 24; there was a reduction in risk with antidepressants compared to placebo in adults aged 65 and older. Depression and certain other psychiatric disorders are themselves associated with increases in the risk of suicide. Patients of all ages who are started on therapy should be monitored appropriately and observed closely for clinical worsening, suicidality, or unusual changes in behavior. Families and caregivers should be advised of the need for close observation and communication with the prescriber. This drug is not approved for use in pediatric patients except for patients with obsessive-compulsive disorder (OCD).

MONITORING RECOMMENDATIONS RELATED TO BLACK BOX DATA—Close observation for suicidal thinking or unusual changes in behavior.

See standard reference text for an all-inclusive list of side effects.

By my signature below, I GIVE consent for the named medication on Page 1 and anticipated dosage range. My signature also indicates that I understand the following:

1. I can refuse to give consent or can withdraw my consent at any time with written notification to the institution director or designee. This will not affect my right to change my decision at a later date. If I withdraw consent after a medication is started, I realize that the medication may not be discontinued immediately. Rather, it will be tapered as rapidly as medically safe and then discontinued so as to prevent an adverse medical consequence, such as seizures, due to rapid medication withdrawal.
2. Questions regarding this medication can be discussed with the Interdisciplinary Team, including the physician. The staff contact person can assist in making any necessary arrangements.
3. Questions regarding any behavior support plan or behavior intervention plan, which correspond with the use of the medication, can be directed to the client's social worker, case manager, or psychologist.
4. I have the right to request a review at any time of my record, pursuant to § 51.30(4)(d) or § 51.30(5)(b).
5. I have a legal right to file a complaint if I feel that client rights have been inappropriately restricted. The client's social worker, case manager, or agency/facility client rights specialist may be contacted for assistance.
6. My consent permits the dose to be changed within the **anticipated dosage range** without signing another consent.
7. I understand the reasons for the use of the medication, its potential risks and benefits, other alternative treatment(s), and the probable consequences that may occur if the proposed medication is not given. I have been given adequate time to study the information and find the information to be specific, accurate, and complete.
8. This medication consent is for a period effective immediately and not to exceed fifteen (15) months from the date of my signature. The need for and continued use of this medication will be reviewed at least quarterly by the Interdisciplinary Team. The goal, on behalf of the client, will be to arrive at and maintain the client at the minimum effective dose.
