Children's Long-Term Support Functional Screen Diagnoses Cue Sheet

This alphabetical list of diagnoses indicates which box screeners should check on the Diagnoses table of the Children's Long-Term Support Functional Screen (CLTS FS). For every diagnosis, the screener should:

- 1) See if it is listed in the CLTS FS Diagnoses Table and check relevant box on the table. Use the search icon to help find the condition you are seeking.
- 2) If not on the CLTS FS Diagnoses Table, look for it in this Diagnoses Cue Sheet. If present here, check the box(es) on CLTS FS Diagnosis Table as indicated. Also list the name of the specific condition/syndrome/diagnosis in the note section on the Diagnosis page.
- 3) If the diagnosis is not listed in this Cue Sheet, then check Diagnoses Table "Other," and write it in.
 - a) Do not write in a diagnosis in "Other" until after making sure it is not listed in the Functional Screen or on this Cue Sheet.
 - b) Contact the CLTS FS Email if there is only one diagnosis and it is not listed on Cue Sheet
- 4) Do not guess which diagnoses on the CLTS FS diagnosis table to check. (See instructions.)

Screeners should ignore letters or numbers before or after diagnoses. You can also ignore the following adjectives appearing before or after diagnoses:

Words to Ignore:

Active History of (check the diagnosis IF it is still current; see instructions)

Acute Idiopathic
Adolescent Intermittent
Bilateral, left, right, Mild, Moderate
Childhood Neonatal

Classic NOS (means "not otherwise specified")

Congenital Primary
End Stage Secondary
General, generalized Severe

Genetic S/P status post (check the diagnosis IF it is still current; see instructions)

Juvenile Status post (check the diagnosis IF it is still current; see instructions)

Chronic Recurrent

Hereditary

Common Abbreviations:

FX	Fracture
LLE	left lower extremity (leg)
LLL	left lower lobe of lung
LUE	left upper extremity (arm)
LE	Lower extremities (legs)
NOS	not otherwise specified

R/O	Rule Out
RLE	right lower extremity (leg)
RLL	right lower lobe of lung
RUE	right upper extremity (arm)
RUL	right upper lobe of lung

Chromosomal Disorders:

- There are 23 pairs of chromosomes, 46 chromosomes in all
- Mind your ps and qs; chromosome deletions are often labeled as either [p] or [q].
- In medical reports it may be noted as a deletion or minus or [-]; these are all the same.
- If the medical report indicates the specific band, for example 11.21, this is not important for purposes of this table.
- Unbalance and Unbalance Translocation are the same thing
