

Tiibishada iyo Wisconsin

Tiibisho, or ama TB, waa cudur uu keeno jeermis la yiraahdo bakteeriyada *Maaykobakteeriya tuubarkuloosis*. Bakteeriyadu waxay badanaa weerartaa sambabada (TB ah sambabada), laakiin waxay weerari kartaa qeyb kasta oo jirka ka mid ah (TB aan sambabada ahayn). TB waxay ku faafi kartaa markuu qofka qaba TB caadi ah bakteeriyada ku sii qaadsiiyo dadka kale hawada qufac ama hindhiso ka dib. Dadka qaba TB waxaa laga daaweyn karaa haddii ay daawo raadsadaan calaamadahooda ka dib.

Qof kasta oo qaba bakteeriyada TB xanuunku kuma soo baxayo. Dadka qaba infakshanka TB daahsoon kuma xanuunsadaan, ma laha wax calaamado ah, oo ma sii faafin karaan TB. Dadka qaba TB daahsoon waxay u qaadan karaan daawo si aysan ugu dillaacin TB caadi ah.

Waxaa jiray 54 bukaan oo laga helay TB Wisconsin sannadkii 2023. Bukaan kaas badankoodu waxay TB ka soo qaadeen meelo ka baxsan Mareykanka ama waxaa qaadsiiyey dad qaba TB caadi ah.
