Vice-Chair, Committee on Health Room 8 South, State Capitol, PO Box 7882 Madison, WI 53707 Honorable Donna M. Rozar Vice-Chair, Committee on Health, Aging and Long-Term Care Room 13 West, State Capitol PO Box 8953 Madison, WI 53708

Dear Senators and Representatives:

The Wisconsin Department of Health Services is pleased to submit to you, as required by Wis. Stat. §253.115, the annual report on the status of Universal Newborn Hearing Screening in Wisconsin. In 2022, 100% of hospitals with birthing facilities and most licensed homebirth providers continued to universally offer hearing loss screening for babies. Of the 59,810 Wisconsin births, 59,714 babies had newborn screening records in 2022, and 58,475 of those babies (97.9%) were screened for hearing loss. The American Academy of Pediatrics recommends that the refer rate – the percentage of infants who do not pass the inpatient hearing screening in one or both ears and require a referral for additional testing – be below 4.0%. For babies born in 2022, Wisconsin's refer rate was 1.4%.

Hearing loss is the most common congenital birth defect, affecting an approximately 150 babies annually in Wisconsin. Hearing loss is considered to be a neurodevelopmental emergency. Left undetected and therefore untreated, hearing loss impedes speech, language, cognitive, and social development. The Wisconsin Sound Beginnings (WSB) Program continues to make progress toward meeting its goal of ensuring that hearing screening is available to 100% of babies born in Wisconsin and to ensure that appropriate services are provided to children who do not pass their hearing screens.

The WSB Program is improving all areas of early hearing detection and intervention through a variety of activities and working with its partners in other agencies to promote a sound beginning for Wisconsin's children.

Sincerely,

Kiste Johns

Kirsten L. Johnson Secretary-designee
