

# BE ANTIBIOTICS AWARE

**This dental clinic follows safe prescribing practices. Here is what you can do to be antibiotics aware too.**

**Tell us if you have a penicillin allergy.** We may be able to help you determine if it's a true allergy.

**Come in for dental care routinely and quickly.** Routine and quick care can reduce the need for antibiotics.

**You do not need to take antibiotics before dental procedures if you have a prosthetic joint.** Recommendations have changed and antibiotics are no longer needed for most patients.

**If you do need antibiotics prior to a dental procedure talk with your dentist about your options.** Clindamycin is no longer recommended.
