

IS IT BLUE-GREEN ALGAE

...OR SOMETHING ELSE?

Blue-green algae are bacteria known as *cyanobacteria* and are a natural part of water bodies. With enough sunlight and nutrients, cyanobacteria can grow quickly and form a blue-green algae *bloom*.

- Blooms often look like spilled paint or pea soup and can change the color of the water to green, blue, turquoise, purple, tan, or white.
- **Blue-green algae can produce toxins that can make people and animals sick.**
- In Wisconsin, blooms are most common in the summer, or May to September.
- Blooms have look-alikes, so use your best judgment when choosing a spot to swim. Do not swim in discolored water or where you see foam, scum, or algal mats.

HARMFUL

Green water that looks like pea soup

Surface scum that looks like spilled paint

Floating globs or mats

NOT HARMFUL

Long, hair-like filamentous green algae

Yellow plant pollen

Tiny, green floating plants (duckweed)

To learn more about blue-green algae, visit www.dhs.wi.gov and search "algae."
