

# TEST STRIPS IN THIS PACKET

Xylazine test strips are not guaranteed to detect all forms of xylazine. People could overdose even if the test says there is no xylazine in the drug supply. In addition, there are other dangers associated with using drugs, including but not limited to infection, disease, and psychological harm. The safest practice is to avoid using drugs altogether. Xylazine test strips do not detect fentanyl.

**ALWAYS CARRY NALOXONE**  
**CALL NEVER USE ALONE: 877-696-1996**  
**CALL 211 FOR RECOVERY RESOURCES**

## 1 Gather what you need

Drug Sample

Scoop  
10 mg

Mixing Tin

Water  
1 teaspoon

Xylazine Test Strip  
located on other side of this panel

## 4 Take action if xylazine is present in your sample

- Don't use the drug.
- Keep **naloxone** available.
- In case of an overdose, call 911 and provide rescue breathing until help arrives.
- Use less and go slowly.
- Use with others and take turns.
- Call **Never Use Alone: 877-696-1996**.

# Xylazine Test Strip Instructions

Xylazine is being found in many drugs. Always test before using!

Xylazine test strips should only be used on opiates.

- 1 Gather what you need
- 2 Prepare mixture
- 3 Test mixture
- 4 Take action if xylazine is present in your sample

of HEALTH SERVICES

## 2 Prepare mixture

### 1. Blend your sample.

Before testing, make sure the drugs are well mixed. Xylazine can clump in one part of the sample, which can give inaccurate test results if not thoroughly mixed.

### 2. Scoop and dilute.

1 scoop + 1 teaspoon water

### 3. Stir it up.

Make sure drug sample and water are well mixed.

## 3 Test mixture

### 1. Hold strip in mixture for 15 seconds.

### 2. Place strip on flat surface for 3 minutes.

### 3. Read results:

No red line or one red line on the bottom means the test is invalid. Usually this is because the liquid did not travel far enough up the strip.

**IMPORTANT:** Do **NOT** read the results before 3 minutes or after 10 minutes.
