However, comparisons with estimates from years of FHS data before 2012 should be made with caution because a landline telephone design was used for sampling prior to 2012. This table shows estimated percentages and numbers based on survey responses.</p> <p>C.I. = Confidence Interval (specifies a range within which the true value probably lies). See Technical Notes.</p> <p>A double dash (--) indicates 0.5% or less, fewer than 1,000 people, and/or insufficient sample size to produce reliable estimates.</p>
